
Probability (P):

- **High (3):** Occurs or has the potential to occur frequently (daily or weekly).
- **Medium (2):** Occurs occasionally (monthly or quarterly).
- **Low (1):** Rarely occurs (annually or less frequently).

Severity of Impact (S):

- **High (3):** Significant impact on the environment (e.g., major spills, significant air or water pollution, uncontrolled emissions to air, water or land or results in significant use of natural resources).
- **Medium (2):** Moderate impact on the environment (e.g., minor spills, moderate/controlled emissions to air, water or land, limited use of natural resources).
- **Low (1):** Minor or negligible impact on the environment (e.g., small leaks, minimal emissions to air, water or land, minimal use of renewable resources).

Improvement (I):

- **High (1):** Significant potential for reducing environmental impact.
- **Medium (2):** Some potential for improvement.
- **Low (1):** Little or no potential for improvement.

Regulated (R):

- **High (1):** detailed or extensive government specifications apply with detailed / strong performance criteria (i.e. the issuance of a facility specific permit), detailed and extensive corporate or customer requirements classified as "high importance".
- **Medium (2):** some government regulations with moderate performance criteria apply, some corporate or customer requirements with moderate performance criteria risk of fines.
- **Low (1):** Few or no, less restrictive and prescriptive government regulations apply or corporate or customer requirements apply minimal risk.

Life Cycle

Yes = Life Cycle controlled in part by facility and considered

No = Life Cycle not controlled by facility

Types of Impacts:

AQ	Air Quality- air emissions / air quality impact (actual or potential / accidental
WG	Waste Generation - waste generation – solid and / or liquid waste - may be r
SS	Sanitary Sewer Discharge - actual or potential / accidental
SW	Storm Water Quality - actual or potential / accidental
GW	Groundwater
SI	Soil Impact
EC	Energy Consumption - electric or natural gas
NR	Natural Resource - consumption, including water

recycled, landfilled, c
